

**BRAC UNIVERSITY**  
**Department of Computer Science and Engineering**  
**CSE 260: Digital Logic Design**

Examination: **Quiz 2**  
 Duration: 25 Minutes

Semester: Spring 2025  
 Full Marks: 15

Answer the following questions. You **MUST** show your workings/calculations where applicable.  
 Figures in the right margin indicate marks.

Name: <u>Solution</u>	ID:	Section:
-----------------------	-----	----------

<b>1.</b> <b>CO2</b>	Convert the following function to its corresponding canonical <b>POS</b> form using boolean algebraic formulas and find the max terms: $F(D, C, A, B) = A' + B + C' + AB'$ [5+3]
<b>2.</b> <b>CO2</b>	Simplify the following function to minimum literals: $F(A, B, C, D) = \sum(0, 1, 5, 6, 7, 9, 10, 11, 13, 14, 15)$ [2+5]

$$\begin{aligned}
 1. \quad F(D, C, A, B) &= A' + B + C' + AB' \\
 &= (\underline{A'} + B + C' + \underline{A}) (\underline{A'} + \underline{B} + C' + \underline{B'}) \\
 &= (B + C' + 1) (A' + C' + 1) \\
 &= 1 \cdot 1 = 1
 \end{aligned}$$

So, there is no max term.

2.

$$\begin{aligned}
 F(A, B, C, D) &= \sum(0, \underline{1}, \underline{5}, \underline{6}, \underline{7}, \underline{9}, 10, 11, \underline{13}, \underline{14}, \underline{15}) \\
 &= \underline{A'B'C'D'} + \underline{A'B'C'D} + \underline{A'B'CD} + \underline{A'BCD} + \underline{A'BCD} + \underline{AB'C'D} + \underline{AB'C'D'} + \underline{AB'CD} + \underline{AB'CD} + \underline{AB'CD} + \underline{AB'CD} \\
 &= \underline{C'D}(\underline{A'B'} + \underline{A'B} + \underline{AB'} + \underline{AB}) + \underline{BC}(\underline{A'D'} + \underline{A'D} + \underline{AD'} + \underline{AD}) + \underline{AB'C}(D + D') + \underline{A'B'C'D'} \\
 &= \underline{C'D}(A' + A) + \underline{BC}(A' + A) + \underline{AB'C} + \underline{A'B'C'D'} \\
 &= \underline{C'D} + \underline{BC} + \underline{AB'C} + \underline{A'B'C'D'} \\
 &= \underline{C'D} + \underline{C}(B + AB') + \underline{A'B'C'D'} \\
 &= \underline{C'D} + \underline{C}(B + B')(B + A) + \underline{A'B'C'D'} \\
 &= \underline{C'D} + \underline{AC} + \underline{BC} + \underline{A'B'C'D'} \\
 &= \underline{C'}(\underline{D} + \underline{A'B'D'}) + \underline{AC} + \underline{BC} \\
 &= \underline{C'}(\underline{D} + \underline{A'B'}) \cdot (\underline{D} + \underline{D'}) + \underline{AC} + \underline{BC} \\
 &= \underline{C'}(\underline{D} + \underline{A'B'}) + \underline{AC} + \underline{BC} \\
 &= \underline{C'D} + \underline{A'B'C'} + \underline{AC} + \underline{BC} \quad (Ans)
 \end{aligned}$$
